Sep 2018 - Sep 2023

Sr Business Analyst

Capgemini

Project Name: NextGen Digital Wealth & Multi-Asset Portfolio Tracker
Objective: End-to-end development and rollout of a consumer-facing digital wealth mobile and web application designed for automated portfolio tracking, goal-based savings, and real-time asset performance metrics.
Key Responsibilities & Achievements:
-Requirement Elicitation: Conducted workshops with investment product managers and compliance stakeholders to define business logic for cross-institution account aggregation via Open Banking APIs (e.g., Plaid/Yodlee).
-Agile Deliverables: Authored comprehensive user stories, Epics, and functional requirement documents (FRDs) in JIRA, defining strict acceptance criteria for features like automated dividend tracking and net-worth visualization dashboards.
-Data Modeling & Compliance: Collaborated with data architects to map complex asset classes (Equities, Mutual Funds, Cryptocurrencies) and ensured features complied with KYC, AML, and GDPR data privacy standards.
-UAT Orchestration: Designed and executed User Acceptance Testing (UAT) scenarios, utilizing SQL queries to validate portfolio data accuracy against custodian feeds, successfully reducing post-production data syncing bugs by 25%.
Project Name : RenewBuy (Partner App & POSP Ecosystem): A dedicated digital insurance portal engineered for field agents, featuring automated commission tracking, real-time renewal reminders, and cross-company product integrations.p-off points.
