Vikramaditya Roy

AREAS OF EXPERTISE

- Credit Risk
- Basel III/3.1
- RWA Modeling
- Regulatory Reporting
- SQL
- Python
- Tableau
- JIRA
- UAT
- Agile
- PRA
- ECB
- Stress Testing
- CCAR
- ICAAP
- Market Risk
- Counterparty Risk
- Data Governance
- Risk Analytics
- IFRS-9

INDUSTRY EXPERTISE

- Investment Banking
- Regulatory Risk
- Capital Markets

EDUCATION

- Master of Science in Financial Engineering
- Bachelor of Engineering

PROFESSIONAL EXPERIENCE

Vikramaditya Roy has 7 years of experience as a Senior Functional Consultant specialising in Enterprise Credit Risk Automation, Basel III/3.1 Capital Calculations, and Regulatory Reporting within the Investment Banking industry. He specializes in designing robust risk analytics platforms, translating complex prudential regulations into automated calculation engines, and optimizing credit decisioning workflows. Vikramaditya collaborates closely with quantitative modelers, credit risk officers, and IT developers to streamline risk-weighted asset calculations, stress testing data pipelines, and regulatory submissions across global jurisdictions.

MAJOR PROJECTS

Global Investment Bank – Enterprise Regulatory Capital & Stress Testing Engine – Lead Functional Risk Consultant

- Spearheaded the functional design and implementation of a multi-jurisdictional Basel III/3.1 Regulatory Capital calculation platform, automating RWA calculations for over $45B in wholesale exposures.
- Authored end-to-end functional specifications translating PRA and ECB capital rules, credit risk mitigation (CRM) haircut algorithms, and supervisory slotting criteria into scalable calculation logic.
- Engineered comprehensive data validation, reconciliation, and exception-handling frameworks using SQL and Python, ensuring 100% data integrity between front-office trade capture systems and regulatory risk datamarts.
- Led the functional delivery of automated CCAR and ICAAP stress-testing scenario engines, enabling risk officers to model macroeconomic shock impacts across credit portfolios in real-time.
- Designed and executed over 350 end-to-end UAT test cases covering complex derivative collateralizations, securitization tranches, and wholesale lending defaults, achieving zero post-deployment regulatory defects.
- Facilitated executive walkthroughs and steering committee presentations with Chief Risk Officers, regulators, and external auditors, establishing complete transparency and auditability of calculation methodologies.
