INDUSTRY EXPERTISE

- Digital Banking
- Payment Systems
- Retail Banking

EDUCATION

- Master of Business Administration (MBA)
- Bachelor of Technology (Computer Science)

PROFESSIONAL EXPERIENCE

Ananya Sharma has 8 years of experience as a Senior Business Analyst specialising in Digital Banking Platforms, Payment Gateways, and Core Banking Transformation within the Banking and Financial Services industry. She has led end-to-end SDLC initiatives for omni-channel customer journeys, open banking APIs, and high-volume transaction processing systems. Ananya is proficient in Agile Scrum ceremonies, BRD/FRD authoring, SQL data validation, JIRA workflow design, and user acceptance testing across multi-tier banking architectures.

MAJOR PROJECTS

Private Sector Bank – Omni-Channel Digital Banking Transformation – Lead Business Analyst

- Led the comprehensive requirement elicitation, process flow engineering, and functional architecture design for an enterprise digital banking platform serving over 4 million active retail and corporate customers.
- Authored 25+ detailed Business Requirement Documents (BRDs), Functional Specification Documents (FSDs), and API mapping matrices integrating core banking systems with modern microservices architectures.
- Engineered automated KYC and instant onboarding workflows leveraging India Stack components (Aadhaar e-KYC, DigiLocker, eSign, and Account Aggregator), slashing onboarding turnaround time from 2 days to under 6 minutes.
- Collaborated closely with enterprise security, fraud risk, compliance, and regulatory audit teams to ensure strict adherence to RBI cybersecurity and data localization mandates.
- Managed end-to-end User Acceptance Testing (UAT) across 15 sprint cycles, defining 200+ test scenarios, resolving critical defects in JIRA, and ensuring 99.98% sprint release stability.

Payment Technology Services – Real-Time Payment Gateway & ISO 20022 Migration – Senior Consultant – Payments

- Spearheaded the business architecture and migration strategy for a high-throughput payment gateway processing over 12 million daily transactions across UPI, IMPS, NEFT, and RTGS payment rails.
- Designed end-to-end message mapping logic and data validation pipelines to transition legacy payment messaging formats to modern ISO 20022 XML standards.
- Conducted extensive data modeling and transaction reconciliation analyses using SQL, identifying settlement bottlenecks and reducing reconciliation discrepancies by 85%.
- Facilitated daily standups, backlog refinement, and sprint planning sessions as Proxy Product Owner, bridging communication between business stakeholders and distributed engineering teams.
- Delivered comprehensive functional training, user manuals, and operational SOPs to operations and customer support divisions, ensuring flawless go-live adoption.
