Mohit Choudhary

AREAS OF EXPERTISE

- Finacle-7/10/11
- Credit Risk
- Regulatory Capital
- Basel-III/3.1
- RWA
- EAD
- PD
- LGD
- ECL
- AML
- UAT
- BRD
- FRD
- AS-IS/TO-BE
- Process Mapping
- Data Modeling
- Excel-Advanced
- OCR
- UCP-600
- URDG-758

INDUSTRY EXPERTISE

- Credit Risk Management
- Regulatory Capital Reporting
- Core Banking Solutions
- Trade Finance

EDUCATION

- Post Graduate Diploma in Banking (PGDB)/ MBA
- B.Tech (Bachelor of Technology)

PROFESSIONAL EXPERIENCE

Mohit Choudhary has 10 years of experience as a Senior Functional Consultant specializing in Credit Risk and Regulatory Capital within the Banking industry. He possesses deep expertise in core banking platforms, particularly Finacle versions 7, 10 and 11, where he validates complex business processes such as credit appraisal, drawing power calculations and trade cycles. His skill set includes drafting BRDs and FRDs, leading UAT coordination, and performing data modeling using advanced Excel. Mohit has successfully delivered digital lending, overdraft automation, and early warning signal solutions across major Indian banks, collaborating with risk underwriters, IT architects and senior stakeholders to ensure regulatory compliance and operational efficiency.

MAJOR PROJECTS

Banking – Small Business Digital Lending Interface Optimization – Senior Functional Risk Analyst

- Designed and authored comprehensive business requirement documents and functional specifications that transformed a confusing single-page application into a step-by-step guided lending wizard, resulting in reduced application drop-outs.

Trade Finance – Automated Letter of Credit Compliance Validation Portal – Senior Functional Risk Analyst

- Served as core banking SME to translate UCP 600 trade regulations into validation parameters within Finacle 11, establishing automated compliance checks for letter of credit transactions.

Banking – Digital Overdraft & Renewal Automation Platform – Senior Manager – Credit Risk & Process Analyst

- Analyzed legacy overdraft renewal workflow and designed an OCR-enabled digital platform that cut renewal cycle time from twelve days to forty-eight hours, dramatically improving service speed.
- Validated business rules engine parameters in Finacle 10 to automatically bypass automated renewal when corporate turnover dropped over 20%, routing cases for manual underwriter review and mitigating credit risk.

Credit Risk – Automated Scoring Engine Upgrade – Senior Manager – Credit Risk & Process Analyst

- Translated complex credit appraisal policies into functional logic strings that automated PD flagging for ratings below BBB, LGD calculations with a 25% haircut, and ECL triggers for assets overdue 90 days, supporting Basel capital modeling.
- Authored detailed user stories and acceptance criteria that locked workflow execution when collateral coverage fell below the 1.33× baseline, ensuring strict compliance with internal risk thresholds.

Supply Chain Finance – Invoice Discounting H2H Portal Integration – Senior Manager – Credit Risk & Process Analyst

- Designed functional end-to-end testing plans for a secure host-to-host API linking corporate ERP systems with core banking, enabling instant invoice discounting and high-volume bulk processing.
- Executed UAT scripts that injected corrupted IFSC fields to uncover data validation gaps, documented defects, and coordinated remediation, achieving clean sign-off from business stakeholders.

Corporate Lending – Automated Early Warning Signal Dashboard – Senior Manager – Business Banking Asset Analyst

- Engineered an early warning signal dashboard that aggregated live transaction feeds, automatically identifying stressed credit profiles when fund-insufficient checks exceeded three per month or inventory audits dropped over 25%.
- Authored end-to-end test scenarios based on credit policy rules, verifying system capability to lock active draw-downs during critical alerts and prevent further exposure.
