Gaurav Tripathi

AREAS OF EXPERTISE

- Excel
- SQL
- Tableau
- Python
- R
- Go
- Google Cloud Platform
- Generative AI
- CECL
- Credit-Risk
- SAS
- Prompt Engineering
- Linear Regression
- Stress Testing
- CCAR
- ICAAP
- IRB
- Data Visualization
- IFRS-9
- Basel-IV

INDUSTRY EXPERTISE

- Credit Risk
- Regulatory Capital
- Banking
- Financial Services

EDUCATION

- Executive PG Diploma in Data Science
- PGDM Finance & Marketing
- BE

PROFESSIONAL EXPERIENCE

Gaurav Tripathi has 9 years of experience as a Senior Business Analyst specializing in Credit Risk and Regulatory Capital within the Banking and Financial Services industry. He leverages advanced analytical tools such as Python, SQL, Excel, Tableau, and R to build and validate risk models, including CECL, IFRS-9, and Basel-IV frameworks. His expertise spans stress testing (CCAR, ICAAP), IRB-to-IFRS-9 model linkages, and climate risk modelling, ensuring robust regulatory compliance across multiple jurisdictions. Gaurav has led collaborations with regulators (PRA, ECB, Fed/OCC, OSFI), business stakeholders, and technology teams to deliver automated reporting solutions and data visualizations that drive informed decision-making. He consistently applies rigorous testing, data reconciliation, and process-improvement methodologies to mitigate risk, enhance platform stability, and support strategic financial objectives.

MAJOR PROJECTS

Private Sector Bank – Credit Risk Model Development and Regulatory Reporting – Senior Business Analyst – Credit Risk

- Developed and validated Linear Regression models aligned with CECL guidelines, performing extensive backtesting, sensitivity analysis, and stress scenario forecasting to ensure model robustness.

Private Sector Bank – Wholesale IRB Capital Modeling and Climate Risk Integration – Business Analyst IV

- Modeled and validated Wholesale IRB capital models, ensuring adherence to regulatory standards and accurate risk weight calculations.
- Executed IFRS 9 implementation tasks, translating accounting requirements into system specifications and supporting data migration activities.

Private Sector Bank – FinTech – Credit Risk Analyst

- Developed credit risk models in Python, performing data wrangling and statistical analysis to quantify exposure probabilities.
- Identified potential financial risks through bucket analysis and trend examination, enabling proactive mitigation of delinquency patterns.

Private Sector Bank – Enterprise Application Development – Software Engineer

- Developed multi-screen application code implementing search criteria and role-based authentication, enhancing user experience and security.
- Gathered and analyzed client requirements, translating business needs into detailed functional specifications and high-level technical design documents.
